

# First-aid and Evacuation Training Program

**Learn how to evacuate passengers and take care of casualties until the emergency services arrive, after a road accident.**

## Goals

- Taking care of casualties and carrying out an evacuation, as well as ensuring occupants' safety until the emergency services arrive, after a road accident
- Achieving compliance with labour legislation and insurance company recommendations

## Participants

Passenger vehicle drivers, who may be required to assist injured passengers and ensure the safety of people present at the accident scene

## Requirements

None

## First-aid theoretical content

- Protection
- Alerting the emergency services
- The casualty is bleeding profusely
- The casualty is unconscious
- The casualty is not breathing
- The casualty states s/he is feeling

Ultra-realistic simulations due to the use of:

- Latest generation manikins (25 - 50 - 70 kg)
- A smoke generator
- An accident visual and sound simulation device (STRESSIT system)

## Nombre de participants

12 per group

## Durée

1 day per group

## Lieu

Your company

pour plus d'informations

unwell

- The casualty states s/he is injured
- Mass casualties (priorities - protocol for decision-making)

### **First-aid practical content (morning)**

- Real-life cases using training manikins
- Situations based on INRS (National Institute for Research and Safety) training programs, such as the “appointed staff member first-aider in the workplace” program
- Evacuation theoretical content (afternoon)
- Accident statistics for public transport vehicles
- Characteristics of these accidents
- Specific risks
- Difficulties linked to evacuating a vehicle on its side

### **Evacuation practical content (afternoon)**

Simulations according to the following cases:

- Vehicle on its wheels
- Vehicle on its side
- Vehicle on fire
- Presence of casualties and people with reduced mobility
